

Central University of Punjab, Bathinda

Program: M.Sc. Life Sciences (specialization in Animal Sciences)

Academic Session: 2019 – 21

Department of Animal Sciences

School of Basic and Applied Sciences

Through 6th BoS

(after Curriculum Audit)

Program: M.Sc. Life Sciences (specialization in Animal Sciences)

(Academic Session: 2019 - 21)

Semester – I

Course Code	Course Title	Type	L (hr)	T (hr)	P (hr)	Cr
	Core Courses*					
LAS.508	Biochemistry	CC	2	1		3
LAS.511	Cell Biology	CC	3	-	-	3
LAS.516	Animal Evolution and Classification	CC	3	-	-	3
LAS.517	Ecological Principles	CC	3	-	-	3
LAS.520	Lab Course (Practical) – I	CC	-	-	10	5
	Discipline Elective Courses (Opt any one)					
LAS.514	Animal Cell Culture and Applications	DE	2	-	-	2
LAS.525	Nanobiology	DE	2	-	-	
	Inter-Disciplinary (ID) Course					
LAS.515	Fundamentals of Cell Biology	ID	2	-	-	2
	Compulsory Foundation#					
CST.501	Computer Applications for Sciences	CF	2	-	-	2
	Total Credits					23

#Note: In case of technical difficulty to offer the compulsory foundation courses at the department/university level, the student may opt through MOOCs (online) from the SWAYAM portal.

Attached as Annexure 1

Examination Pattern

- A: Continuous Assessment: [25 Marks]
- i. Surprise Test (minimum three) - Based on Objective Type Tests (10 Marks)
 - ii. Term paper (10 Marks)
 - iii. Assignment(s) (5 Marks)
- B: Pre-Scheduled Mid Semester Test-1: Based on Subjective Type Test [25 Marks]
- C: Pre-Scheduled Mid Semester Test-2: Based on Subjective Type Test [25Marks]
- D: End-Term Exam (Final): Based on Objective Type Tests [25 Marks]
- E: Practical: (Annexure - A)
- F: Seminar: (Annexure – B)
- G: Discipline Enrichment Course: The final evaluation shall be carried out for 50 Marks based on objective type question paper to be set by the associated faculty members. (An internal evaluation of objective type 25 Marks each for twice shall be conducted).
- H: Research Project / Dissertation: The final result of the project will be on 5 – point scale and evaluated as Excellent, Very Good, Good, Average, and Unsatisfactory. Which will be mentioned on the mark sheet/transcript but not be counted towards overall Grade Point Average (GPA).

Total No. of Credits:

Semester	No. of Credits
Semester - I	23
Semester - II	23
Semester - III	25
Semester - IV	19
Total no. of credits	90

Mode of Transaction

The department faculty members would assist the learners (students) in the construction of knowledge by creating experiences where students' old information can transact with new information to create meaningful knowledge. In this context the mode of transaction for the courses to be taught to the students under this M.Sc. program would be as follows:

i. **The classroom learning/practicals/project work would be based on:**

Lecture, Demonstration, Project Method, Seminars, Group discussions, Focused group discussions, Team teaching, Field visits, Brain storming, E- tutoring, Dialogue Mode, Mobile teaching, Collaborative learning, Experimentation, Panel discussion, Tutorials, Problem solving, Debates, Self-learning, and Case studies.

ii. **The following tools shall be used in teaching and practicals:**

PPT, WhatsApp, Videos, Blogs, Multimedia packages, TED Talks, e-content, and google drive.

Annexure – A

Examination Pattern

Practical: Lab course – I, II & III [100 Marks each]

- | | | |
|-----|-----------------------------------|-----------------|
| i. | Day to day performance – | 60 Marks |
| | a. <i>Attendance –</i> | <i>10 Marks</i> |
| | b. <i>Continuous assessment -</i> | <i>30 Marks</i> |
| | c. <i>Lab Record -</i> | <i>10 Marks</i> |
| | d. <i>Overall performance -</i> | <i>10 Marks</i> |
| ii. | End-semester exam – | 40 Marks |
| | a. <i>Major Question -</i> | <i>20 Marks</i> |
| | b. <i>Minor Question -</i> | <i>10 Marks</i> |
| | c. <i>Viva-voce -</i> | <i>10 Marks</i> |

Annexure – B

Examination Pattern

Credit Seminar: I & II

Seminar: [50 Marks]

- | | | |
|----|---|-----------------|
| a. | <i>Report submission -</i> | <i>10 Marks</i> |
| b. | <i>Contents -</i> | <i>10 Marks</i> |
| c. | <i>Presentation skills -</i> | <i>10 Marks</i> |
| d. | <i>Innovation -</i> | <i>10 Marks</i> |
| e. | <i>Question & Answers -</i>
<i>(Interaction session)</i> | <i>10 Marks</i> |

Modified on 11.2.2019

List of Value Added Courses

The list of Value added courses has been provided to choose any two courses in a programme.

- (i) Ethics for Science
- (ii) Professional Ethics
- (iii) Academic Writing
- (iv) Value Education
- (v) Stress Management
- (vi) Personality Development through Life Skills
- (vii) Physical & Mental Well Being
- (viii) Pedagogical Studies
- (ix) Data Analysis using spread sheet
- (x) Soft Skill Training
- (xi) Leadership
- (xii) Personal Management
- (xiii) Wealth Management
- (xiv) Reasoning Ability
- (xv) MS office Specialist
- (xvi) Practical Taxation
- (xvii) Ethical Issues & Legal Awareness
- (xviii) Disaster Management
- (xix) Nutrition and Specialty Foods
- (xx) Shorthand & Typing
- (xxi) SPSS

Semester - I

Core Courses:

L	T	P	Credits
2	1	-	3

LAS.508: Biochemistry

<p>Learning outcomes: The course is designed to teach fundamentals and basics of biochemistry and to prepare the students for advanced aspects of biochemistry such as nutrition and metabolism associated with human physiology.</p>		
Unit	Syllabus	Lectures
1.	<p>Principles of Biophysical Chemistry: pH, buffers, reaction kinetics, thermodynamics, colligative properties, chemical bonds and stabilizing interactions: van der Waals, electrostatic, hydrogen bonding & hydrophobic interactions.</p>	9
2.	<p>Bioenergetics: Introduction, Laws of thermodynamics, Concept of free energy, Entropy, Enthalpy, standard free energy, determination of ΔG for a reaction. Relationship between equilibrium constant and standard free energy change. Biological oxidation-reduction reactions.</p>	12
3.	<p>Composition, Structure and Function of Biomolecules: Classification, structure, general properties and functions of polysaccharides. Lipids – Classification, structure, properties and functions of fatty acids. Proteins – Peptide synthesis, Primary, Secondary, Tertiary and Quaternary structures of proteins.</p>	12
4.	<p>Enzymology: Historical perspective, general characteristics, nomenclature, IUB enzyme classification (specific examples), measurement and expression of enzyme activity, enzyme assay, factors influencing enzyme activity, active site, Michaelis-Menten equation and its importance. Definitions of IU, Katal, enzyme turnover and specific activity. Clinically important enzymes.</p>	12
<p>Suggested Reading:</p> <ol style="list-style-type: none"> 1. Berg, J. M., Tymoczko, J. L. and Stryer, L. (2010). Biochemistry. W.H. Freeman & Company. USA. 2. Mathews, C. K., Van Holde, K. E. and Ahern, K. G. (2000). Biochemistry. 		

Oxford University Press Inc. New York.

3. Nelson, D. and Cox, M. M. (2008). Lehninger Principles of Biochemistry. BI publications Pvt. Ltd. Chennai, India.
4. Shukla, A. N. (2009). Elements of Enzymology. Discovery Publishing. New Delhi, India.
5. Voet, D. and Voet, J. G. (2008). Principles of Biochemistry. CBS Publishers & Distributors. New Delhi, India.

L	T	P	Credits
3	-	-	3

LAS.511: Cell Biology

Learning outcomes: Students will understand the structure and basic components of prokaryotic and eukaryotic cells, including macromolecules, membranes, and organelles and their related functions. This will provide a basis for understanding disease processes in which signalling is compromised.		
Unit	Syllabus	Lectures
1.	Cell: Evolution of the cell, molecules to cell, prokaryotes and eukaryotes. Membrane Structure and Function: Models of membrane structure, membrane proteins, membrane carbohydrates, membrane transport of small molecules, membrane transport of macromolecules and particles.	12
2.	Structural Organization and Function of Intracellular Organelles: Lysosomes, ribosomes, peroxisomes, golgi apparatus, endoplasmic reticulum and its types, mitochondria and chloroplast, Structure of mitochondria and nucleus, oxidation of glucose and fatty acids, electron transport chain (ETC): oxidative phosphorylation	12
3.	The Cytoskeleton and Cell Communication: The nature of cytoskeleton, intermediate filaments, microtubules, actin filaments, cilia and centrioles, organization of the cytoskeleton. Cell adhesions, cell junctions and the extracellular matrix, cell-cell adhesion and communication, cell matrix adhesion, collagen the fibrous protein of the matrix, non-collagen component of the extra cellular matrix.	12
4.	Cell Cycle and signaling pathways: Mitosis and meiosis, their regulation, steps in cell cycle, regulation and control of cell cycle events, Introduction to cell signalling: signalling networks, protein phosphorylation/de-phosphorylation,	12

Intracellular signalling pathways: covering the major pathways in cells (MAPK, PI3K-AKT, JAK-STAT, SMAD and NF-kB), their components and key roles of protein kinases and phosphatases
<p>Suggested Reading:</p> <ol style="list-style-type: none"> 1. Alberts, B., Bray, D., Lewis, J., Raff, M., Roberts, K. and Watson, J. D. (2010). Molecular Biology of the Cell. Garland publishers, Oxford. 2. Celis, J. E. (2006). Cell Biology: A Laboratory Handbook, Vol 1, 2, 3. Academic Press, UK. 3. Gupta, P. K. (2008). Cytology, Genetics and Evolution. Rastogi publications, Meerut, India. 4. Karp, G. (2010). Cell and Molecular Biology: Concepts and Experiments. John Wiley & Sons. Inc. New Delhi, India.

L	T	P	Credits
3	-	-	3

LAS.516: Animal Evolution and Classification

Learning outcomes: The course is designed to provide a common understanding of how life and organisms evolved, forces that drive the evolution and diversity of life forms.		
Unit	Syllabus	Lectures
1.	Evolution: Darwin & the origin of species, Lamarckism, Microevolution: concept of natural selection, genetic drift (founder and bottle neck effect) and gene flow, Hardy-Weinberg law, directional, disruptive, stabilizing and sexual selection. Speciation: biological species concept, allopatric, sympatric and parapatric speciation, concept of hybrid zone. Macro-evolution: origin of life on earth, Oparin and Haldane hypothesis, Urey-Miller experiments, geological timescale and events, continental drift, mass extinctions, evolutionary trends	12
2.	Systematics: Binomial nomenclature; three domain classification; phylogenetic tree construction; applications of phylogeny; cladistics: monophyletic, paraphyletic and polyphyletic groups; shared and derived characters; homoplasy; parsimony analysis; molecular clocks	10
3.	Non-chordates: Phylums porifera, cnidarian, Platyhelminthes, Rotifera, Lopophorates, Mollusca,	12

	Annelida, nematode, Arthropoda, Echinodermata	
4.	Chordates: Overview of chordates: cephalochordate, urochordata, Myxini, Petromyzontida, Chondrichthyes, Actinopterygii, Actinistia, Dipnoi, Amphibia, Reptilia and Mammalia	12
<p>Suggested Reading:</p> <ol style="list-style-type: none"> 1. Damron, W.S. (2012). Introduction to Animal Science. Prentice Hall. 5th Edition. 2. Evolution: Making sense of life by Carl Zimmer 3. Lisa A.U. et al. (2016). Campbell Biology. Pearson publishers, 11th edition. 4. Primack, R.B. (2014). Essentials of Conservation Biology. Sinauer Associates Inc., 6th edition 5. Modern textbook of Zoology: Vertebrates by R.L. Kothpal 6. The Tree of Life by Pablo Vargas. Sinauer Associates, Oxford University Press 7. Kapoor, V.C., 1983. Theory and practice of animal taxonomy. (Oxford & IBH Publ. Co.) 8. Mayr, E. & Ashlock, P.D., 1991. Principles of Systematic Zoology. (McGraw Hill International Edition) 		

L	T	P	Credits
3	-	-	3

LAS.517: Ecological Principles

Learning outcomes: The course is designed to provide in-depth insights into the living organism in relation to its environment.		
Unit	Syllabus	Lectures
1.	Introduction to Ecology: Habitat and niche, niche width and overlap; fundamental and realized niche; resource partitioning; character displacement. Adaptation, ecosystem, biotic and abiotic factors, food chain, food webs, trophic levels	10
2.	Community ecology and biogeography: Nature of communities; community structure and attributes; richness and evenness; keystone species, flagship species and umbrella species; dominant species, ecotone, edge effect, ecotypes, plant indicators; ecological succession – types and mechanism; Simpson’ diversity index and Shannon-Weiner index	12

	MacArthur and Wilson's island biogeography equilibrium theory-limitations and modifications; colonization vs. extinction; species area relationship Biomes: types (terrestrial and aquatic), distribution and unique features	
3.	Ecosystem Dynamics: Concept and components of ecosystem, ecological pyramids, energy flows in different ecosystems, energy models, ecosystem productivity. Types and characteristics of ecosystem- terrestrial (forest, desert, grassland) and aquatic (pond, marine), wetlands, estuaries, natural and manmade ecosystems, forest types in India. Biogeochemical cycles – cycling of water, nutrients.	11
4.	Population Ecology: Population characteristics, population interaction; prey-predator relationships; Theories of population growth, population dynamics, regulation. Population growth curves; population regulation; life history strategies (<i>r</i> and <i>K</i> selection); Concept of metapopulation, demes and dispersal, niche-concept and types, interdemic extinctions, age structured populations	12

Suggested Reading:

1. Urry, L. A. et al. (2016). Campbell Biology. Pearson publishers, 11th edition.
2. Smith, T. M. and Smith, R. L. (2012). Elements of Ecology. Benjamin Cummings Publishing Company, 8th edition.
3. Begon, M., Howarth, R. W. and Townsend, C. R. (2014). Essentials of Ecology. Wiley Publishers, 4th edition.
4. Odum, E. and Barrett, G. W. (2004). Fundamentals of Ecology. Cengage Learning, 5th edition.
5. Prasanthrajan, M and Mahendran, P. P. (2008). A Text Book on Ecology and Environmental Science

Discipline Elective Courses:

L	T	P	Credits
2	-	-	2

LAS.514: Animal Cell Culture and Applications

Learning outcomes: The goal of this course is to provide the necessary theoretical knowledge on animal cells for *in vitro* studies, their maintenance and manipulation and application of molecular techniques to *in vitro* situations.

Unit	Syllabus	Lectures
1.	Introduction to Animal Cell Culture: Historical background. Good Laboratory Practices (GLP), sterilization methods and techniques. Biology of animal cell and cell-cell interactions, growth environment and culture requirement. Culture, subculture, cell line, cell strain, cell clone. Importance of serum and serum-free media.	8
2.	Cell Culture Types and Characterization: Primary cell culture, tissue culture, organ culture, cell line immortalization, cell line preservation & characterization, karyotype analysis, cellular markers, commercial cell lines, and insect cell culture.	7
3.	Applications of Animal Cell Culture: <i>In vitro</i> transfection of animal cells, cell-based assays, and cell differentiation and movement. Cancer Research, vaccine manufacture, gene and stem cell therapy, production of recombinant proteins, and toxicology studies.	8
4.	Translational Research Applications: Animal cells as the applicable products (recombinants, hybridomas, stem cells and transplants). Focus on Rodent and murine models in scientific research associated with cancer and neurodegenerative diseases.	7

Suggested Reading:

1. Freshney, R. I. (2010). Culture of Animal Cells: A Manual of Basic Technique and Specialized Applications. Wiley-Blackwell, 2010. 6th Edition.
2. Davis, J. M. (2008). Basic Cell Culture. Oxford University Press. New Delhi.
3. Davis, J. M. (2011). Animal Cell Culture. John Willy and Sons Ltd. USA.
4. Freshney R. I. (2005). Culture of Animal Cells. John Willy and Sons Ltd. USA.

5. Butler, M. (2004). Animal Cell Culture and Technology. Taylor and Francis. New York, USA.
6. Verma, A. S. and Singh, A. (2014). Animal Biotechnology. Academic Press, Elsevier, USA.
7. Cartwright, E. J. (2009). Transgenesis Techniques. Humana Press. London, UK.
8. McArthur, R. A. and Borsini, F. (2008). Animal and Translational Models for CNS Drug Discovery. Elsevier. London, UK.
9. Research Journals and Review Articles as suitable and applicable.

L	T	P	Credits
2	-	-	2

LAS.525: Nanobiology

Learning outcomes: The goal of this course is to acquire the interdisciplinary knowledge of basic concepts of nanoscience, biomaterials, characterization techniques and biomedical aspects of nanomaterials.

Unit	Syllabus	Lectures
1.	Nanoscience: Definition and concepts, nanomaterials including nanomaterials classification, properties, applications. Criteria for suitability of nanostructures for biological applications.	8
2.	Nanomaterials: Synthesis, biofunctionalization and characterization techniques like electron microscopy (scanning and transmission), atomic force microscopy; nanoparticle analyzer, zeta potential measurement, electrochemical analyzer, flow cytometry, spectroscopic techniques including spectrophotometer, spectro-fluorimeter & FTIR.	8
3.	Materials in Medicine: Biomaterials, Nanostructures for drug delivery and therapeutics, biosensor, bioimaging and point-of-care diagnostics tools including flow immunoassay and microfluidic devices.	7
4.	Nanotoxicity: Effect of nanomaterials on human health, nanomaterial-cell interaction and characterization, recent progress and challenges in the risk assessment of nanomaterials.	7

Suggested Reading:

1. Bagchi, D., Bagchi, M., Mariyama, H. and Shahidi, F. (2013). Bio-Nanotechnology: A Revolution in Food, Biomedical and Health Sciences. Wiley–Blackwell publication.
2. Rai, M., Duran, N. and Southam, G. (2011). Metal Nanoparticles in Microbiology. Springer publication.
3. Udupa, N., Gupta, P. D. (2009). Nanotechnology in Health Care. Shyam Prakashan publication.
4. Xie, Y. (2012). The Nanobiotechnology Handbook. CRC Press.
5. Murty, B. S., Shankar, P., Raj, B., Rath, B. B. and Murday, J. (2013). A Textbook of Nanoscience and Nanotechnology. Tata Mc Graw Hill Publication.

Inter Disciplinary Course (IDC):

L	T	P	Credits
2	-	-	2

LAS.515: Fundamentals of Cell Biology

Learning outcomes: This is an interdisciplinary course to acquaint the students of different streams with a very basic knowledge and understanding of the basic unit of life: the cell, its structure, composition and function.		
Unit	Syllabus	Lectures
1.	Basic unit of Life: Life at the cellular and molecular level. Introduction to the topics include cellular energetics, membrane phenomena, genetics, and molecular biology.	8
2.	Introduction to the Cell: The evolution of the cell, from molecules to first cell, from prokaryotes to eukaryotes, prokaryotic and eukaryotic genomes, from single cell to multicellular organism.	7
3.	Membrane Structure and Function: Biomembrane at a glance, membrane models: structure and composition, and membrane transport.	8
4.	Structural Organization of Intracellular Organelles: Introduction of subcellular organelles: lysosomes, ribosomes, peroxisomes, golgi apparatus, endoplasmic reticulum, nucleus, mitochondria, and chloroplast.	7

Suggested Reading:

1. Gupta, P. K. (2005). Cell and Molecular Biology. Rastogi publications, Meerut, India.
2. James, D. W., Baker, T.A., Bell, S.P., Gann, A. (2009). Molecular Biology of the Gene. Benjamin Cummings, USA.
3. Johnson, A., Lewis, J., Raff, M. (2007). Molecular Biology of the Cell. Garland Science, USA.
4. Lodish, H., Berk, A., Chris, A. K. and Krieger, M. (2008). Molecular Cell Biology. W.H. Freeman, USA. Alberts, B., Bray, D., Lews, J., Raff, M., Roberts, K. and Watson, J.D. (2010).
5. Molecular Biology of the Cell. Garland publishers, Oxford.
6. Karp, G. (2010). Cell and Molecular Biology: Concepts and Experiments. John Wiley & Sons. Inc. New Delhi, India.

Compulsory Foundation Course:

L	T	P	Credits
2	-	-	2

CST.501: Computer Applications for Sciences

Learning outcomes: Upon successful completion of this course, the student will be able to: Use different operating system and their tools easily; Use word processing software, presentation software, spreadsheet software and latex; Understand networking and internet concepts; and Use computers in every field like teaching, industry and research.

Unit	Syllabus	Lectures
1.	Computer Fundamentals: Introduction to Computer, Input devices, Output Devices, Memory (Primary and Secondary), Concept of Hardware and Software, C.P.U., System bus, Motherboard, Ports and Interfaces, Expansion Cards, Ribbon Cables, Memory Chips, Processors, Software: Types of Software, Operating System, User Interface of popular Operating System, Introduction to programming language, Types of Computer.	8
2.	Computer Network: Introduction to Computer Network, Types of Network: LAN, WAN and MAN, Topologies of Network, Internet concept Word Processing using MS Word: Text creation and Manipulation; Table handling; Spell check, Hyper-linking, Creating Table of Contents and table of figures, Creating	7

	and tracking comments, language setting and thesaurus, Header and Footer, Mail Merge, Different views, Creating equations, Page setting, Printing, Shortcut keys.	
3.	Presentation Tool: Creating Presentations, Presentation views, Working on Slide Transition, Making Notes Pages and Handouts, Drawing and Working with Objects, Using Animations, Running and Controlling a Slide Show, Printing Presentations, Shortcut keys. Spread Sheet: Entering and editing data in cell, Basic formulas and functions, deleting or inserting cells, deleting or inserting rows and columns, printing of Spread Sheet, Shortcut keys.	8
4.	Use of Computers in Education and Research: Data analysis tools, e-Library, Search engines related to research, Research paper editing tools like Latex.	7
Suggested Reading:		
<ol style="list-style-type: none"> 1. Sinha, P.K. Computer Fundamentals. BPB Publications. 2. Goel, A., Ray, S. K. 2012. Computers: Basics and Applications. Pearson Education India. 3. L	T	P	Credits
-	-	10	5

LAS.520: Lab Course (Practical) – I

Learning Outcomes: The lab course-I is designed to acquaint the students with a fundamental knowledge and understanding of the lab reagents preparation, biochemical estimation of biomolecules and techniques involved in biomolecule separation & study of cell structure and function.

1. Laboratory instrumentation
2. Preparation of Buffers and Solutions
3. Biochemical estimation and analysis of Proteins, Lipids and Carbohydrates
4. SDS-and native polyacrylamide gel electrophoresis
5. Gel filtration and Ion-exchange chromatography
6. Cell structure: Compound, Fluorescence, and Electron microscopy
7. Histochemistry: Fixation, Sectioning, Embedding, Processing and Staining
8. Immunocytochemistry
9. Identification of cell mitosis and meiosis stages
10. Life cycles of Silkworm
11. Life cycle of the honeybee
12. Measurement Frequency and abundance of plant communities
13. Mark recaptures method

Note: *Practicals may be added / modified depending on the available faculties / facilities / latest advancements

Updated on: 11.2.2019

LAS.521: Animal Physiology - I

Learning outcomes: This is a specialized course for the Animal Sciences students designed to provide a comprehensive and detailed understanding to the physiological principles common and different to humans and other animals.

Unit	Syllabus	Lectures
1.	Digestive System: Hunger and thirst mechanisms, Feeding strategies, Foregut, midgut, and hindgut fermentation in animals, ruminant and monogastric digestive system, absorption, energy balance, and BMR.	12
2.	Respiratory System:- Comparison of respiration in different species, anatomical considerations, transport of gases, exchange of gases, waste elimination, neural and chemical regulation of respiration.	10
3.	Circulation: Blood corpuscles, haemopoiesis and formed elements, plasma function, blood volume, blood volume regulation, blood groups, haemoglobin, immunity, haemostic control mechanisms, Biochemistry of blood, plasma proteins, and blood coagulation.	10
4.	Nervous System: Gross neuroanatomy of the brain and spinal cord, blood brain barrier, central and peripheral nervous system, Neurons, Neuroglial cells, action potential, neurotransmitters, neural control of muscle tone and posture. Sense Organs: Vision, hearing and tactile response.	13

Suggested Reading:

1. Guyton. (2007). Textbook of Medical Physiology. 11th Edition. Elsevier India Pvt. Ltd. New Delhi.
2. Hill, R. W, Wyse, G. A. and Anderson, M. (2008). Animal Physiology. Sinauer Associates Inc. USA.
3. Murray, R. K. (2009). Harper's Illustrated Biochemistry. Jaypee Publishers, New Delhi.
4. Tyagi, P. (2009). A Textbook of Animal Physiology. Dominant Publishers and distributors, New Delhi, India.

L	T	P	Credits
3	-	-	3

LAS.522: Immunology

Learning outcomes: The objective of this course is to provide basics of immune system where students will learn the components and molecules of immunity and various immune responses at the cellular level that work together to protect the host.

Unit	Syllabus	Lectures
1.	Immune System: Recognition of self and non-self, innate and adaptive immunity, humoral immunity,	12

	immunoglobulins: basic structure, classes and subclasses, structural and functional relationship. Molecular mechanisms of antibody diversity and class switching, Cytokines, Interferons and interleukins.	
2.	Complement System and Major Histocompatibility System: Complement components, their structure & function and mechanisms of complement activation. Structure and functions of Major Histocompatibility Complex (MHC) and Human Leukocyte Antigen (HLA) system. Antigen processing and role of MHC molecules in antigen presentation.	12
3.	Hypersensitivity: Types, features and mechanisms of immediate and delayed hypersensitivity reactions, immunity to microbes, immunity to tumors, AIDS and immune-deficiencies, hybridoma technology, development of vaccine for diseases like AIDS and cancer.	11
4.	Monoclonal Antibodies and Diagnostic Immunology: Production, characterization and applications in diagnosis, therapy, quantitative and qualitative methods for immunoglobulin determination, antigen and antibody reactions, agglutination-precipitation, immunofluorescence and immunoblotting, assessment of human allergic and hormonal diseases.	10

Suggested Reading:

1. Kindt, T. J., Osborne, B. A. and Goldsby, R. A. (2007). Kuby Immunology. 7th Edition. W.H. Freeman, USA.
2. Abbas. (2008). Cellular and Molecular Immunology. CBS Publishers & Distributors, India.
3. Charles, A. and Janeway, J. R. (1994). Immunobiology: The Immune System in Health and Disease. Blackwell Publishing, USA.
4. Delves, P. J., Roitt, I. M. and Seamus, J. M. (2006). Roitt's Essential Immunology (Series–Essentials). Blackwell Publishers, USA.
5. Elgert K. D. (2009). Immunology: Understanding the Immune System. Wiley-Blackwell, USA.
6. Paul, W. E. (1993). Fundamental Immunology. Raven Press, SD, USA.
7. Sawhney, S. K. and Randhir, S. (2005). Introductory Practical Biochemistry. Alpha Science International Ltd. New Delhi, India.
8. Tizard (2008). Immunology: An Introduction. Cengage Learning, Thompson, USA.

L	T	P	Credits
3	-	-	3

LAS.523: Molecular Biology

Learning outcomes: This course is designed for detailed understanding the molecular processes of DNA replication, transcription, translation, and regulation of gene expression.

Unit	Syllabus	Lectures
1.	Genome Organization, Structure and Conformation of Nucleic Acids: Chromosome structure, chromatin and its regulation, nucleosome and its assembly, nucleolus, repetitive DNA, Structure of DNA, denaturation and renaturation, Various conformations of nucleic acids including non-B DNA structures.	12
2.	DNA Replication: Prokaryotic and eukaryotic DNA replication, mechanism of DNA replication, enzymes and accessory proteins involved in DNA replication, replication errors, DNA repair & recombination, genome editing. Basic concepts of recombinant DNA technology.	11
3.	Transcription and mRNA Processing: Types of RNA, prokaryotic & eukaryotic transcription, general and specific transcription factors, regulatory elements and mechanisms of transcription regulation, transcriptional and posttranscriptional gene silencing: initiation, elongation & termination of transcription, capping, polyadenylation, splicing, editing, mRNA stability.	12
4.	Translation: Genetic code, prokaryotic & eukaryotic translation, the translation machinery, mechanisms of chain initiation, elongation and termination, regulation of translation, co- and post-translational modifications, epigenetics, control of gene expression at transcription and translation level.	10

Suggested Reading:

1. Fasman, G. D. (1989). Practical Handbook of Biochemistry and Molecular Biology. CRC Press, Taylor and Francis Group, UK.
2. Gupta, P. K. (2005). Cell and Molecular Biology. Rastogi publications, Meerut, India.
3. James, D. W., Baker, T. A., Bell, S. P., Gann, A. (2009). Molecular Biology of the Gene. Benjamin Cummings, USA.
4. Jocelyn, E. K., Elliott, S. G., Stephen, T. K. (2009). Lewin's Genes X. Jones & Bartlett Publishers, USA.
5. Johnson, A., Lewis, J., Raff, M. (2007). Molecular Biology of the Cell. Garland Science, USA.

Additional reading:

6. Lodish, H., Berk, A., Chris, A. K. and Krieger, M. (2008). Molecular Cell

Biology. W.H. Freeman, USA.
 7. Sambrook, J., Fritish, E. F., Maniatis, T. (2000). Molecular Cloning: A Laboratory Manual. Cold Spring Harbor Laboratory Press, New York.

L	T	P	Credits
2	1	-	3

LAS.527: Essentials of Genetics

Learning outcomes: Apart from learning Mendelian genetics, students will be exposed to Non-mendelian genetics and genetic analysis.

Unit	Syllabus	Lectures
1.	Mendelian Principles and Concept of Gene: Dominance, segregation, independent assortment, allele, multiple alleles, pseudoallele, complementation tests. Extension of Mendelian Principles: Codominance, incomplete dominance, gene interactions, pleiotropy, genomic imprinting, penetrance and expressivity, phenocopy, linkage and crossing over, sex linkage, sex limited and sex influenced characters.	12
2.	Gene Mapping Methods: Linkage maps, tetrad analysis, mapping with molecular markers, mapping by somatic cell hybrids, development of mapping population. Human Genetics: Pedigree analysis, LOD score for linkage testing, karyotypes, genetic disorders. Quantitative Genetics: Polygenic inheritance, heritability and its measurements, QTL mapping.	12
3.	Gene Concept: Fine structure of gene, Benzer's experiments, complementation analysis and recombination. Recombination: Site-specific, homologous, transposition and non-homologous end joining (NHEJ). Mutation: Types, causes and detection, mutant types – lethal, conditional, biochemical, loss of function, gain of function, germinal verses somatic mutants, insertional mutagenesis, applications in reverse and forward genetics, mutations and Hardy Weinberg equilibrium, molecular basis of spontaneous and induced mutations.	11
4.	Extra-Chromosomal Inheritance: Chloroplast and mitochondrial inheritance, structural and numerical alterations of chromosomes: deletion, duplication, inversion, translocation, Ploidy and their genetic implications.	10

Suggested Reading:

1. Anthony, J. F., Miller, J. A., Suzuki, D. T., Richard, R. C., Gilbert, W. M. (1998). An Introduction to Genetic Analysis. W.H. Freeman publication,

USA.

2. Atherly, A. G., Girton, J. R., McDonald, J. F. (1999). The Science of Genetics. Saundern College publication.
3. Snusted, D. P., Simmons, M. J. (2010). Principles of Genetics. John Wiley & Sons, New York.
4. Gupta, P. K. (2009). Genetics. Rastogi publications, Meerut, India.
5. Gupta, P. K (2008). Cytology, Genetics and Evolution. Rastogi publications, Meerut, India.

Additional reading:

6. Jocelyn, E. K., Elliott, S. G., Stephen, T. K. (2009). Lewin's Genes X. Jones & Bartlett Publishers, USA.
7. Schaum, W. D. (2000). Theory & problems in Genetics by Stansfield, outline series McGrahill, USA.
8. Tamarin, R. H. (1996). Principles of Genetics, McGrawhill, USA.

Discipline Elective Course:

L	T	P	Credits
2	-	-	2

LAS.529: Genetic Engineering

Learning outcomes: The aim of this core-course is to acquaint the students to versatile tools and techniques employed in recombinant DNA technology. A sound knowledge on methodological repertoire allows students to innovatively apply these in basic and applied fields of biological research.

Unit	Syllabus	Lectures
1.	Tools of Genetic Engineering: Restriction enzymes, Enzymes in genetic engineering, recombinant cloning vectors & their biology (Plasmid-, Phage-, and yeast-based), transformation and selection, genomic and cDNA library construction & DNA-sequencing techniques.	7
2.	Recombinant Expression Systems & Mutagenesis: prokaryotic (Fusion proteins, surface display, removal of selectable marker genes, secretion into periplasm & medium) & eukaryotic (<i>Sachharomyces cerevisiae</i> & Mammalian cell expression system), oligonucleotide-directed and site-directed mutagenesis.	8
3.	Molecular Biotechnology of Microbial Systems: Vaccines (subunit-, peptide-, attenuated-, DNA- and vector-based), Enzymes, Antibiotics, Bioremediation, and Gene therapy.	7
4.	Molecular Biotechnology of Eukaryotic Systems:	8

Engineering of plants (Ti-based system), Transgenic animals (Transgenic rodents), Regulation of recombinant DNA technology, Concerns about safety of consuming genetically modified foods, concerns about the impact of genetically modified organisms on the environment.
<p>Suggested Reading:</p> <ol style="list-style-type: none"> 1. Molecular Biotechnology: Principles and Applications of Recombinant DNA by Bernard J. Glick, Jack J. Pasternak, Cheryl L. Patten, 4th edition. 2010 2. Principles of Gene Manipulation by Sandy B. Primrose, Richard Twyman, Bob Old Seventh edition.2008 3. An introduction to genetic engineering, Third edition by Dr. Desmond S.T. Nicholl. 2011 4. Molecular cloning by R. Green and Joseph Sambrook, 4th Edition, CSHL Press. 2013

L	T	P	Credits
2	-	-	2

LAS.572: Endocrinology

Learning outcomes: The student will develop an understanding of the role of the endocrine system in maintaining homeostasis and health and able to understand the integrativ working of the human body by studying signaling pathways.		
Unit	Syllabus	Lectures
1.	General Introduction to Hormone: History, endocrine glands, hormones as chemical messengers, stimulus for hormone release: change in homeostasis, Neurosecretion and neuroendocrine system. Hormones: Structure, receptor type, regulation of biosynthesis and release (including feedback mechanism like short, long and ultra-feedback system).	6
2.	Reproductive Hormones: Male and female sex hormones. Hypothalamic hormones: CRH, TRH, GnRH, PRL/PRIH, GHRH/GHRIH. Pituitary hormones - Anterior and posterior pituitary hormones. Molecular mechanism of origin of GnRH cells, migration and site of release, reproductive cycles in females. Role of different guidance molecules involved during early GnRH development and adult GnRH System. Interplay of hormones during reproductive cycle, pregnancy, parturition and lactation: Different pathologies and genes involved.	10
3.	Hormone Biosynthesis and Mode of Action: The hypothalamo- hypophyseal axis. Hypothalamo-vascular	10

	system. Hormones from hypothalamus: chemistry and physiology of releasing and release inhibiting hormones; Regulation of hypothalamic hormone secretion. Thyroid hormones, growth hormones, adrenal hormones and catecholamines, glucocorticoid hormones. Neurohypophysis: synthesis and storage of oxytocin and vasopressin	
4.	Other endocrine organs: Regulation of the release of neurohypophyseal hormones; Other organs with endocrine function: heart (ANP), kidney (erythropoietin), liver (angiotensinogen, IGF-1), adipose tissue (leptin, adiponectin).	4
<p>Suggested Reading:</p> <ol style="list-style-type: none"> Norris, D. O., and Carr, J. A. (2012). Vertebrate Endocrinology, 5th Edition. Academic Press. Nelson, D. L., and Cox, M.M. (2008). (2009). Introduction to Endocrinology. Prentice Hall India Learning Private Limited. 		

Inter Disciplinary Course (IDC):

L	T	P	Credits
2	-	-	2

LAS.528: Basics in Neuroscience

Learning outcomes: This is an interdisciplinary course to acquaint the students of different streams with a basic knowledge and understanding of human nervous system and its control over the entire body.		
Unit	Syllabus	Lectures
1.	Introduction to Nervous System: Basic anatomy, parts of central nervous system & peripheral nervous system.	7

2.	Introduction to Neurons: The neuron doctrine, Nissl and Golgi stains, components of neurons, classification and types of neurons, cytology of neurons, dendrites structure and function, axons structure and functional aspects, ultrastructure, myelination and synapses.	8
3.	Structure and Function of Glial Cells: Different types of glial cells: astrocytes, oligodendrocytes and Schwann cells, types of astrocytes, importance of astrocytes in glutamate metabolism and blood brain barrier, functions of other glial cells: oligodendrocyte and microglial cells, microglial phenotypes, overview of glial and neuronal relationship in the CNS, glial – neuronal interplay in the CNS.	8
4.	Action Potential & Neurotransmitters: Action potentials & channels responsible for action potential, all or none law, Nernst equation; neurotransmitters: excitatory neurotransmitters & inhibitory neuro transmitters.	7

Suggested Reading:

1. Guyton. (2007). Textbook of Medical Physiology. 11th Edition. Elsevier India Pvt. Ltd. New Delhi.
2. Hill, R. W, Wyse, G. A. and Anderson, M. (2008). Animal Physiology. Sinauer Associates Inc. USA.

4. Levitan, I. B., Kaczmarek, L. K. (2015). The Neuron: Cell and Molecular Biology. Oxford University Press, USA; 4th edition.
5. Kandel, E. R., Schwartz, J. H., Jessell, T. M. (2012). Principles of Neural Science. McGraw-Hill Companies; 5th edition.
6. Matthews, G. G. (2000). Neurobiology: Molecules, Cells and Systems. Wiley-Blackwell; 2nd edition.

L	T	P	Credits
-	-	6	6

LAS.540: Lab Course (Practical) – II

Learning outcomes: The lab course - II is designed to acquaint the students with a fundamental knowledge in human physiology, measurement parameters toward understanding the pathophysiology, and techniques involved in identification and quantification of protein expression and molecular biology techniques.

1. Measurement of vital parameters: Blood pressure, Blood glucose, Heartbeat (ECG), Pulse Rate, and Glucose tolerance test.
2. DigiFrog: Online animal dissection module – 1.
3. Spirometry
4. ELISA
5. Western blotting
6. Dot blot technique
7. Double immunodiffusion
8. Determination of BOD/COD
9. RNA isolation
10. DNA isolation
11. Polymerase Chain Reaction
12. cDNA synthesis and RT-PCR analysis
13. Gene cloning: Primer designing, Restriction digestion, ligation, transformation and screening.

Note: *Practicals may be added/modified depending on the available faculties / facilities / latest advancements

L	T	P	Credits
1	-	-	1

LAS.542: Seminar – I

Learning outcomes: To improve student's scientific aptitude and presentation skills. The student should select a specific topic based on a review / research article and prepare a presentation of approximately 15 - 20 minutes. The student should also prepare a short report of 6-10 pages.

Updated on: 11.2.2019

Core Courses:

LAS.551: Developmental Biology

L	T	P	Credits
3	-	-	3

<p>Learning outcomes: The course in developmental biology is an introduction to animal development and places special emphasis on mammalian and human development. The principal objective is to introduce students to the developmental processes that lead to the establishment of the body plan of vertebrates and the corresponding cellular and genetic mechanisms. They will also understand how gene activation plays a role in differentiation and development.</p>		
Unit	Syllabus	Lectures
Unit	Syllabus	Lectures
1.	Beginning of a new organism: Principles of development, Oogenesis, Spermatogenesis, Fertilization, Polyspermy and prevention of polyspermy, Morula, Cleavage and its types, Blastulation and Gastrulation, Different movements occur during Gastrulation	10
2.	Early embryonic development: Anatomical and morphological changes that occur during development, Early development of amphibians, Drosophila and mammals; axis formation in Drosophila and Amphibians.	12
3.	Later embryonic development: Central nervous system and the epidermis; Neural crest cells and axonal specificity; Endoderm, Mesoderm and Ectoderm	12
4.	Regeneration: Tertrapod limb development, metamorphosis, regeneration and ageing, teratogenesis	8
<p>Suggested Reading:</p> <ol style="list-style-type: none"> 1. Dawkins, R. (1996). The Blind Watchmaker, W.W. Norton & Company Jones and Bartlett Publishers. 2. Futuyma, D. J. (2009). Evolution. Sinauer Associates Inc. USA. 3. Hake, S. and Wilt, F. (2003). Principles of Developmental Biology. W.W. Norton & Company, New York, USA. 4. Hall, B. K. and Hallgrimsson, B. (2007). Strickberger's Evolution. Jones and Bartlett Publishers, India. 5. Lewin, R. (2004). Human Evolution - An Illustrated Introduction. Wiley-Blackwell, USA. 6. Scott, F. and Gilbert, S. F. (2013). LAS.555: Animal Physiology - II

L	T	P	Credits
3	-	-	3

Learning outcomes: This is a specialized course for the Animal Sciences students designed to provide a comprehensive and detailed understanding to the physiological principles common and different to humans and other animals. The student would be well versed with physical, chemical and biological processes occurring in the animal tissues and organ systems

Unit	Syllabus	Lectures
1.	Cardiovascular System: Comparative anatomy of heart structure, myogenic heart, specialized tissue, ECG – its principle and significance, cardiac cycle, heart as a pump, blood pressure, neural and chemical regulation of all above, lymph and lymph nodes. Overview of cardiovascular diseases	12
2.	Excretory System: Comparative physiology of excretion, kidney, urine formation, urine concentration, waste elimination, micturition, regulation of water balance, blood volume, blood pressure, electrolyte balance, acid-base balance.	11
3.	Hormone action: Endocrine glands, Master gland and basic mechanism of hormone action, Neuroendocrine integration- Afferent pathways, Integration centers, Efferent pathways, Physiological and biochemical actions and pathophysiology (hyper and hypo secretion). Thermoregulation - comfort zone; body temperature – physical, chemical, neural regulation, acclimatization.	12
4.	Musculoskeletal System: Bones of the skeleton, muscles, cartilage, tendons, ligaments, joints and other connective tissues, The basic mechanism of muscle contraction and muscle fatigue.	10

Suggested Reading:

1. Guyton. (2007). Textbook of Medical Physiology. 11th Edition. Elsevier India Pvt. Ltd. New Delhi.
2. Hill, R. W, Wyse, G. A. and Anderson, M. (2008). Animal Physiology. Sinauer Associates Inc. USA.
3. Murray, R. K. (2009). Harper's Illustrated Biochemistry. Jaypee Publishers, New Delhi.
4. Tyagi, P. (2009). A Textbook of Animal Physiology. Dominant Publishers and distributors, New Delhi, India.

L	T	P	Credits
2	1	-	3

LAS.513: Techniques in Life Sciences

Learning outcomes: The goal of this course for students is to acquire the necessary theoretical and experimental knowledge of various laboratory and analytical instruments.

Unit	Syllabus	Lectures
1.	Spectroscopy and Chromatography Techniques: UV-Vis, fluorimeter, FTIR, mass spectroscopy and NMR. Thin layer chromatography (TLC), gel filtration and ion exchange, affinity chromatography, GC, GLC and HPLC.	12
2.	Microscopy: Light microscopy, phase contrast microscopy, fluorescent microscopy, confocal microscope, scanning electron microscopy (SEM), transmission electron microscopy (TEM) and atomic force microscopy.	10
3.	Basic Molecular Biology Techniques: Isolation, purification and analysis of protein and nucleic acids. Electrophoresis: Principle of gel electrophoresis, polyacrylamide gel electrophoresis (PAGE and SDS-PAGE), agarose gel electrophoresis and 2-Dimensional gel electrophoresis. Polymerase chain reaction (PCR): Principle, types and applications. Blotting techniques: Southern, Northern, Western analysis, <i>In situ</i> hybridization etc.	12
4.	Immunological and Cell Culture Techniques: Perfusion, Fixation, different techniques of sectioning, MTT assay, Electrophysiological techniques like Patch clamp immunochemical techniques, immunocytochemistry, immunofluorescence, radioimmunoassay (RIA), Different enzyme linked immunosorbent assay (ELISA), immunoprecipitation, flow cytometry. Cell and tissue culture techniques: Primary and secondary cultures.	12

LAS.553: Vascular Biology

Learning outcomes: This course will cover cellular and integrated vascular functions under both normal and pathological conditions such as atherosclerosis, diabetes, hypertension and stroke, which are the leading cause of morbidity and mortality in the modern world.		
Unit	Syllabus	Lectures
1.	Vascular Biology: Introduction, structure and function of the vascular system. Vascular dysfunction in various pathophysiological states including endothelial dysfunction, inflammation, atherosclerosis and diabetes.	8
2.	Cardiovascular Biology: Basic cardiovascular physiology, cardiovascular system including blood coagulation system, platelet biology, haemostasis & thrombosis and signalling pathways involved in thrombus biology.	7
3	Vascular Disorders: Peripheral vascular disease, stroke, platelet in cardiovascular diseases, diseases of the circulatory system including lymphatic diseases.	8
4	Vascular Medicine: Novel drugs including antiplatelet drugs, diagnostic methods including vascular angiography, imaging modalities, and other therapeutic approaches to better diagnose, prevent, or treat cardiovascular diseases.	7
Suggested Reading:		
<ol style="list-style-type: none"> 1. Michael, R. J. and Christopher, J. W. (2011). Vascular Disease: Diagnostic and Therapeutic Approaches. Cardiotext Publishing. 1st Edition. 2. L	T	P	Credits
2	1	-	3

LAS.554: Neurobiology and Degeneration

Learning objectives: This course emphasizes the basis of major diseases affecting the nervous system and has been developed for the students of Animal Sciences to gain enough knowledge in brain disease mechanisms. The course will deal on the clinical, neuropathological, physiological and molecular features of human disorders.

Unit	Syllabus	Lectures
1.	Introduction to Human Brain and Nervous System; Metabolic functions of the Brain; Energy Requirements; Oxidative stress; Factors contributing to the neurodegeneration.	6
2.	Alzheimer's disease (AD): Mechanism(s) of AD pathogenesis and pathophysiology, e.g. amyloid cascade hypothesis, tau, and the therapeutic approaches. Review of recently completed clinical trials and treatment prospects. Parkinson's Disease (PD): genetics - alpha synuclein, parkin, DJ1, PINK1, and LRRK2. Gene therapy for PD.	8
3.	Huntington's Disease, multiple sclerosis, clinical overview of frontotemporal degeneration (FTD) and amyotrophic lateral sclerosis (ALS).	8
4.	Therapeutic intervention: Current treatment strategies including Pharmaceutical and Natural products based therapies for various human neurodegenerative diseases.	8

Suggested Reading:

1. Guyton. (2007). *Textbook of Medical Physiology*. 11th Edition. Elsevier India Pvt. Ltd. New Delhi.
2. Hill, R. W, Wyse, G. A. and Anderson, M. (2008). *Animal Physiology*. Sinauer Associates Inc. USA.

Compulsory Foundation Course:

LAS.502: Research Methodology

L	T	P	Credits
2	0	-	2

Learning objectives: To ensure that the student understands various aspects of research methods, ethics, technical and scientific writings and literature search. This course will also help the students to understand the complex outcomes of their results using biostatistical approaches in testing hypothesis, designing experiments, analyzing experimental data and interpreting the results.

Unit	Syllabus	Lectures
1.	Scientific Writing: Literature survey and review, sources of literature, methods of literature review and techniques of writing the reviewed literature. Understanding a research problem, selecting the research problem, steps in formulation of a research problem, formulation of research objectives, and construction of a hypothesis.	8
2	Basic principles of experimental designs, data collection, processing, and interpretation. Basics of citation and bibliography/reference preparation styles, report presentation.	7
3.	Biosafety for Human Health and Environment. Good laboratory practices (GLP), biosafety issues for using cloned genes in medicine, agriculture, industry. Genetic pollution, risk and safety assessment from genetically engineered organisms.	8
4	Ethical theories, ethical considerations during research,	7

	ethical issues related to animal testing and human project. Intellectual property rights (IPRs), patents and copyrights, fair use, plagiarism and open access publishing.	
Suggested Reading:

(2011): Biometry, Fourth Ed., W.H. Freeman Publishers. 		

LAS.503: Basic Statistics for Sciences

L	T	P	Credits
2	-	-	2

Learning objectives: To provide the understanding and use of Statistical techniques for students of science departments.		
Unit	Syllabus	Lectures
1.	Descriptive Statistics: Meaning, need and importance of statistics. Attributes and variables. Measurement and measurement scales. Collection and tabulation of data. Diagrammatic representation of frequency distribution: histogram, frequency polygon, frequency curve, ogives, stem and leaf plot, pie chart.	7
2.	Measures: Measures of central tendency, dispersion (including box and whisker plot), skewness and kurtosis. Linear regression and correlation (Karl Pearson's and Spearman's) and residual plots.	7
3.	Random variables and Distributions: Discrete and continuous random variables. Discrete Probability distributions like Binomial, Poisson and continuous distributions like Normal, F and student-t distribution.	8

4.	Differences between parametric and non-parametric statistics. Confidence interval, Errors, Levels of significance, Hypothesis testing. Parametric tests: Test for parameters of Normal population (one sample and two sample problems) z-test, student's t-test, F and chi-square test and Analysis of Variance (ANOVA). Non-Parametric tests: One sample: Sign test, signed rank test, Kolmogrov-Smirnov test, run test. Critical difference (CD), Least Significant Difference (LSD), Kruskal-Wallis one-way ANOVA by ranks, Friedman two-way ANOVA by ranks.	8
<p>Suggested Reading:</p> <ol style="list-style-type: none"> 1. P. L. Meyer, Introductory Probability and Statistical Applications, Oxford & IBH Pub, 1975. 2. R. V. Hogg, J. Mckean and A. Craig, Introduction to Mathematical Statistics, Macmillan Pub. Co. Inc., 1978. 3. F. E. Croxton and D. J. Cowden, Applied General Statistics, 1975. 4. P. G. Hoel, Introduction to Mathematical Statistics, 1997. 		

XXX.XXX: Students will opt any discipline specific course(s) from MOOC/SWAYAM online portal

LAS.570: Lab Course (Practical) – III

L	T	P	Credits
-	-	4	4

Learning outcomes: The lab course-III is designed to acquaint the students with animal handling, immunological techniques, blood cell isolation, cellular toxicity based biochemical assays and advanced cell biology and molecular biology techniques.

1. Animal handling: mice/rat/rabbit (tutorials only)
2. DigiFrog: Online animal dissection module – 2
3. Animal Perfusion
4. Polyclonal antibody raising
5. Immunohistochemistry
6. Isolation of Lymphocytes from whole blood
7. Cell trypsinization and Cell count (Hemocytometer)
8. MTT Assay
9. Cell cycle monitoring by flow cytometry
10. Microscopic examination of human parasite life cycles (amoeba, cestodes, nematodes, and plasmodium)
11. Animal cell transfection (lipid based and electroporation)

Note: Practicals may be added / modified from time to time depending on available faculties / facilities.

L	T	P	Credits
-	-	6	6

LAS.599: Project / Dissertation (Part – I)

Learning outcomes: The objective of the project (part I) would be to ensure that the student learns the nuances of the scientific research and writing skills. Here the student will have to write her/his research project outline (synopsis) including an extensive review of literature with simultaneous identification of scientifically sound (feasible and achievable) objectives backed by a comprehensive and detailed methodology.

L: Lectures; T: Tutorial; P: Practical; Cr: Credits; * Compulsory courses

Core Courses:

L	T	P	Credits
2	-	-	2

LAS.573: Metabolism

Learning outcomes: This course is designed to describe the principles of metabolism, and the differences between the catabolic and anabolic processes.		
Unit	Syllabus	Lectures
1.	Metabolism of Carbohydrates: Glycolysis, gluconeogenesis, TCA cycle, hexose monophosphate (HMP) shunt, disorders of carbohydrate metabolism.	8
2.	Metabolism of Lipids: Biosynthesis and oxidation of saturated and unsaturated fatty acids, glycerides, phospholipids and cholesterol, lipoproteins and their significance, disorders of lipid metabolism.	7
3.	Amino Acid Metabolism: Biosynthesis of protein, general catabolism of amino acids, deamination, transamination, urea cycle, disorders of amino acid metabolism.	8
4.	Nucleic Acid Metabolism: Biosynthesis of purine and pyrimidine nucleotides, disorders of purine and pyrimidine metabolism - gout, aciduria, xanthinuria.	7
Suggested Reading:		
<ol style="list-style-type: none"> 1. Harper H. A. (1997). Review of Physiological Chemistry. Lange Medical Publications, Los Angeles. 2. T. A. Ramakrishnan (1994). Textbook of Clinical Biochemistry. Publications, Chennai. 3. Zilwa, J. E., Pannale, P. A., Philip, R. (1988). Clinical Chemistry in Diagnosis and Treatment, New York. 4. Devlin, D. T. (1997). Textbook of Biochemistry with Clinical Correlations. New York, John Wiley and Sons. 5. Plummer, D. T. (1997). An Introduction to Practical Biochemistry. New Delhi, Tata McGraw Hill Publishing Company. 6. Cromwell, L., Weibel, F. J. and Pfeiffer, E. A. (1996). Biomedical Instrumentation and Measurements. New Delhi, Prentice Hall. 		

L	T	P	Credits
2	-	-	2

LAS.574: Animal Behavior

Learning outcomes: This course aims to explore the variety of different behaviors found in a broad range of animal groups, using a scientific and evolutionary approach. This course will enable participants to apply this knowledge to analyze and understand behavior in animals.

Unit	Syllabus	Lectures
1.	Approaches and methods in study of behavior: Conceptual, theoretical and empirical; proximate and ultimate causation; altruism and evolution-group selection, kin selection, reciprocal altruism, co-operation	8
2.	Cognition: Neural basis of learning, memory, cognition, sleep and arousal; biological clocks; development of behavior	8
3.	Sociality: Social communication; social dominance; use of space and territoriality; mating systems, courtship behavior, parental investment and reproductive success; parental care; aggressive behavior	7
4.	Foraging: Habitat selection and optimality in foraging; migration, orientation and navigation; domestication and behavioral changes, ageing and disease, animal personalities	7

Suggested Reading:

1. Alcock J. Animal Behavior: An Evolutionary Approach, 10th Edition
2. Lee Alan D. Principles of Animal Behavior (Third Edition)
3. Breed M and Moore J. Animal Behaviour (2nd edition)
4. Nichollas et al. (2012). From Brain to Behavior. Sinauer Associates; 5th edition.
5. Griffith et al. (2004). Introduction to Genetic Analysis. W H Freeman & Co Ltd; 8th Revised edition.

Discipline Elective Course

L	T	P	Credits
2	-	-	2

LAS.552: Cancer Biology

Learning outcomes: This course will ensure the importance of understanding cell biology in the study of cancer: its cause, progression, mechanism and treatment.		
Unit	Syllabus	Lectures
1.	Biology and Classification of Cancer: Classification, phenotype of a cancer cell, causes of cancer, DNA tumor viruses, RNA tumor viruses,. Different forms of cancers, screening and early detection, tumor markers and molecular tools for early diagnosis of cancer.	8
2.	Basis of Cancer: Oncogenes, tumor suppressor genes, aberrations in signaling pathways, oncogenic mutations in growth promoting proteins, mutations causing loss of growth-inhibition DNA repair in cancer.	7
3.	Oncogenesis and Apoptosis: Intracellular proteolytic cascade, cascade of caspase proteins, adapter proteins, Bcl-2, IAP family proteins, Extracellular control of cell division, tumor necrosis factor and related death signals.	7
4.	Metastasis and Cancer therapy: Heterogeneity of metastatic phenotype, metastatic cascade, basement membrane disruption, three step theory of invasion, proteinase and tumor cell division, prediction of aggressiveness of cancer, different forms of cancer therapy (chemotherapy, radiotherapy, surgery, etc.), use of signal targets towards therapy of cancer and gene therapy,	8
Suggested Reading:

(2004). Molecular Biology of Cancer. Bios Scientific Publishers, USA. 3. King, R. J. B. and Robins M. W. (2006). Cancer Biology. Prentice Hall, USA. 4. Margaret, A. K. and Peter, J. S. (2005). Introduction to the Cellular and Molecular Biology of Cancer. Oxford University Press, USA. 5. Neoptolemos, L. J. (1994). Cancer: A Molecular Approach. Blackwell Publishing, USA. 		

6. Phillis, R., Goodwin, S. and Palladino, M. A. (2002). Biology of Cancer. Benjamin-cummings Publishing Company, USA.

L	T	P	Credits
2	-	-	2

LAS.577: XXX (To be floated later on)

Discipline Enrichment Course:

L	T	P	Credits
3	1	-	4

LAS.575: Career Prospects in Life Sciences

Learning outcomes: The course deals with the scope of career prospects in the field of Life Sciences and allied subjects for higher learning and research. The specific content includes preparation for the national level competitive examinations. The students shall be given exercises, mock tests and practice tests from the previous year's UGC-CSIR - NET examinations.

Unit	Syllabus	Lectures
1	Life Sciences: Scope, importance & career opportunities; classical zoology to modern animal biotechnology; timeline of animal research; and industry needs.	10
2	A revision of concepts in core courses: Cell Biology; Biochemistry; Molecular Biology; Evolution and Developmental Biology; Animal Physiology; and Molecular Biology and Techniques in Biology.	15
3	A revision of concepts in elective courses: Techniques in Life Sciences, Animal Cell Culture and Applications, Genetic Engineering, Nanobiology, Vascular Biology, and Neurobiology and Degeneration.	10
4	Exercises, Mock Tests, Practice Tests from the previous year's related to UGC-CSIR – NET and ICMR - NET examinations.	10

Suggested Reading:

17. Alcock J. Animal Behavior: An Evolutionary Approach, 10th Edition
18. Lee Alan D. Principles of Animal Behavior (Third Edition)

Note: Previous years question papers of UGC/CSIR-NET; ICMR – NET; any other resource materials as per their availability.

Value Based Elective Foundation Course:

L	T	P	Credits
1	-	-	1

Opt any two no. of courses from the list (Annexure1) at the university level.

L	T	P	Credits
1	-	-	1

LAS.543: Seminar – II

Learning outcomes: To improve student’s scientific aptitude and presentation skills. The student should select a specific topic based on a review / research article and prepare a presentation of approximately 15 - 20 minutes. The student should also prepare a short report of 6-10 pages.

L	T	P	Credits
-	-	6	6

LAS.599: Project/ Dissertation - II

Learning outcomes: The objective of Project / Dissertation - II would be to ensure that the student learns the nuances of the scientific research. Herein, the student will carry out the experiments to achieve the objectives as mentioned in the research project outline (synopsis). The data collected as a result of experiments must be meticulously analysed in light of established scientific knowledge to arrive at cogent conclusions.
